/ 100 Needs work

Single Run | \$79 | Order pa_local_smtp

Paid 2026-09-14 20:13 UTC

1 page scanned | 3 check groups | 3 passed

Findings: 0 (0 critical, 0 high, 0 medium, 0 low)

Isolated Single Run delivery integration fixture.

What this audit covers

Automated site-wide URL audit of up to 8 pages: security headers, cookies, CORS, exposed files, accessibility basics, broken links, mixed content, SEO and launch blockers, error leaks, TLS, email DNS, page weight.

Local engineering fixture; not a customer audit.

Pages audited: <https://example.test>

Findings

Nothing to fix at the URL level. Every check that can be answered from outside the app came back clean. That is the honest limit of a URL-only audit: it says nothing yet about broken access control, your admin API, or what your server hands a stranger who asks directly.

What happens next

The audit runs now, usually in 30 to 60 seconds. The report renders on this page, is emailed to you as a PDF, and stays at the hosted link below.
